ABOUT ME

Hi, I'm currently a junior-to-mid react/C# web app developer looking for my first full-time/ part-time IT-industry job.

I'm currently finishing off my last year of study but have a very reduced load this year due to fast tracking my degree, So, I intend to secure a job early as I can now manage it.

If you need anymore information please feel free to contact me at any time.

Thank you for taking the time thus far, and I hope to speak to you soon.

REFEREES

Carly Tierny
Head Veterinary Nurse
Ph: 0459 425 555

Emily Dunn & Cameron Rowgowski
Veterinarians
& Previous Mentees
Ph: 0423 050 719

David Zhang
Veterinarian
& Long-Term Friend
(as character witness)
Ph: 0401 757 750

Pre - 2015

Various Other Part-time Jobs
Big W, Fasta Pasta, WorkPac, Trade-Assistant, Factory Work, Lonestar, Sizzler

SKILLS

Relevant Technical Skills

- Good understanding of HTML5/CSS3/Javascript-ES6/DOM events & objects.
- Currently attempting to self-practice with React to make small applications. I have a quite good understandings of the react documentation, with preference for using hooks and functional components primarily.
- Responsive design via bootstrap v3 previously, however, I'm now making use of responsiveness via react component libraries (react-bootstrap, material-ui) to achieve the same goal.
- I understand React state management (i.e. redux) and documentation though I'm yet to provide a good GitHub example of it other than via 'lifting state' and the contextAPI.
- Quite confident with relational database design, & entity modelling, though not dabbled yet with NoSQLs like MongoDB. I have aspirations to utilize MsSQL heavily however only currently implementing it via the Entity Framework (a .Net ORM) when making REST APIs via ASP.NetCore. All previous uni work was done using an Oracle database.
- I've explored Azure and realize the potential ease of use as a deployment strategy, with or without Docker.
- I am confident with my understanding of the documentation and implementation of GIT as source control locally and via GitHub.

Some Soft Skills

- First and foremost, I'm adaptable & motivated. I feel I've learnt so much in such a short time, and still have strong aspirations to continue with lots of other technology stacks into the future.
- I have a lot of work-life experience, time-management awareness, and good communication skills. For instance, as a vet, its common to have to speak to and solve the problems of over 100 clients and their pets a week.
- I'm genuinely passionate and interested in web app development.
